

# Earth from space

# Game Rules

This adaptation of the Memory game aims to help young people discover how satellites observe the Earth.

There are two levels available.

## *Cycles 1 and 2:*

- Use only maps viewed from space.
- The students take turns flipping over two cards to find a pair.
- The game master can then show the cards depicting views from the ground and ask the students to find features that can be seen from the ground and from space

## *Cycle 3 and more:*

- Use the pairs of images taken from space and from the ground.
- The students take turns flipping over two cards to find a pair showing the same landscape as seen from the ground and from space.
