

Earth from space

Game Rules

This adaptation of the Memory game aims to help young people discover how satellites observe the Earth.

There are two levels available.

Cycles 1 and 2:

- Use only maps viewed from space.
- The students take turns flipping over two cards to find a pair.
- The game master can then show the cards depicting views from the ground and ask the students to find features that can be seen from the ground and from space

Cycle 3 and more:

- Use the pairs of images taken from space and from the ground.
- The students take turns flipping over two cards to find a pair showing the same landscape as seen from the ground and from space.
